

## **BUNDLED CABLES AND METHOD OF MAKING THE SAME**

### **Abstract**

5 Bundled cables and a method for maintaining a plurality of cables together during  
use and installation and for allowing the cables to be easily separated for termination or  
connectorization. The bundled cables include a plurality of cables and a central flexible  
strip coated with a thermoplastic heat-sealable resin for semi-permanently bundling the  
cables. In operation, the strip is heated to activate the heat-sealable resin. The cables are  
10 then placed in contact with the strip to bind to the strip as the heat-sealable resin cools.  
The bond created by the heat-sealable resin is strong enough to hold the cables together  
during installation and use but allows the cables to be easily separated in whole or in part  
from the bundle.
